

OrchidApp

Install OrchidApp on Windows

Step-by-step installation guide

OrchidApp shortcuts appear on the desktop and in the Start menu after setup.

Applies to: Windows 11

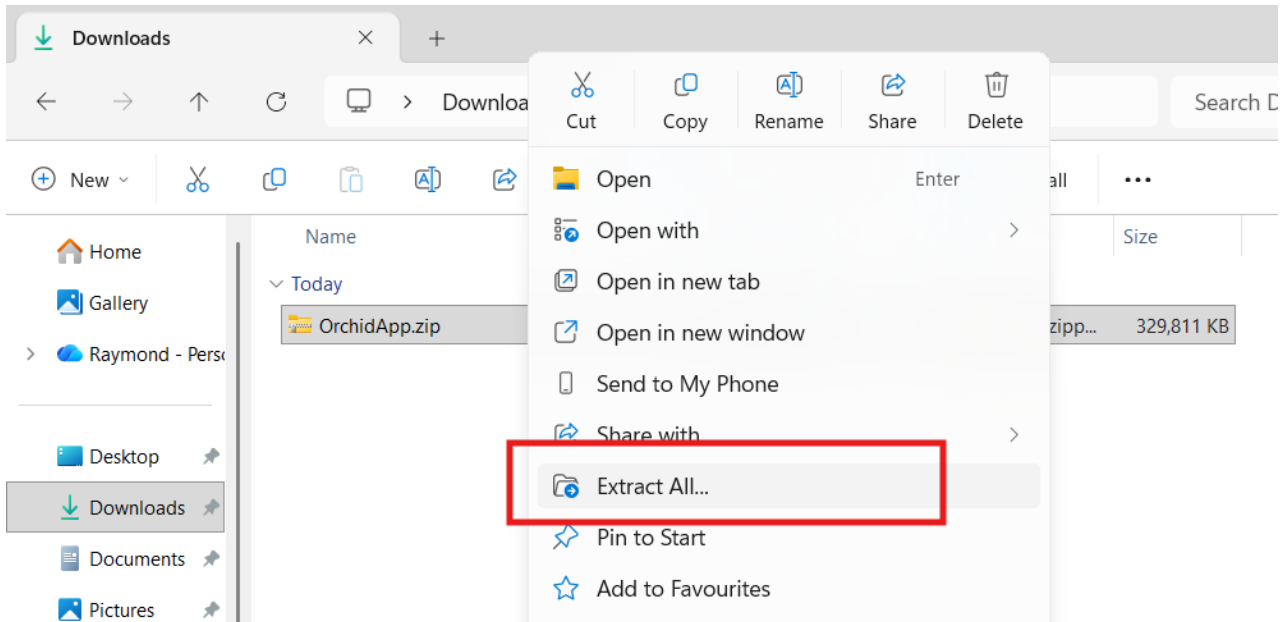

Before you start

- Download or copy the OrchidApp.zip file onto the Windows computer.
- Choose a permanent folder for OrchidApp before creating shortcuts.
- Do not move or rename the OrchidApp folder after creating shortcuts. If you do, run Create-Shortcut.cmd again.

Important: OrchidApp is expected to stay in the folder you extract it to. Use a sensible folder such as Documents\OrchidApp, not a temporary location.

1. Find the OrchidApp ZIP file

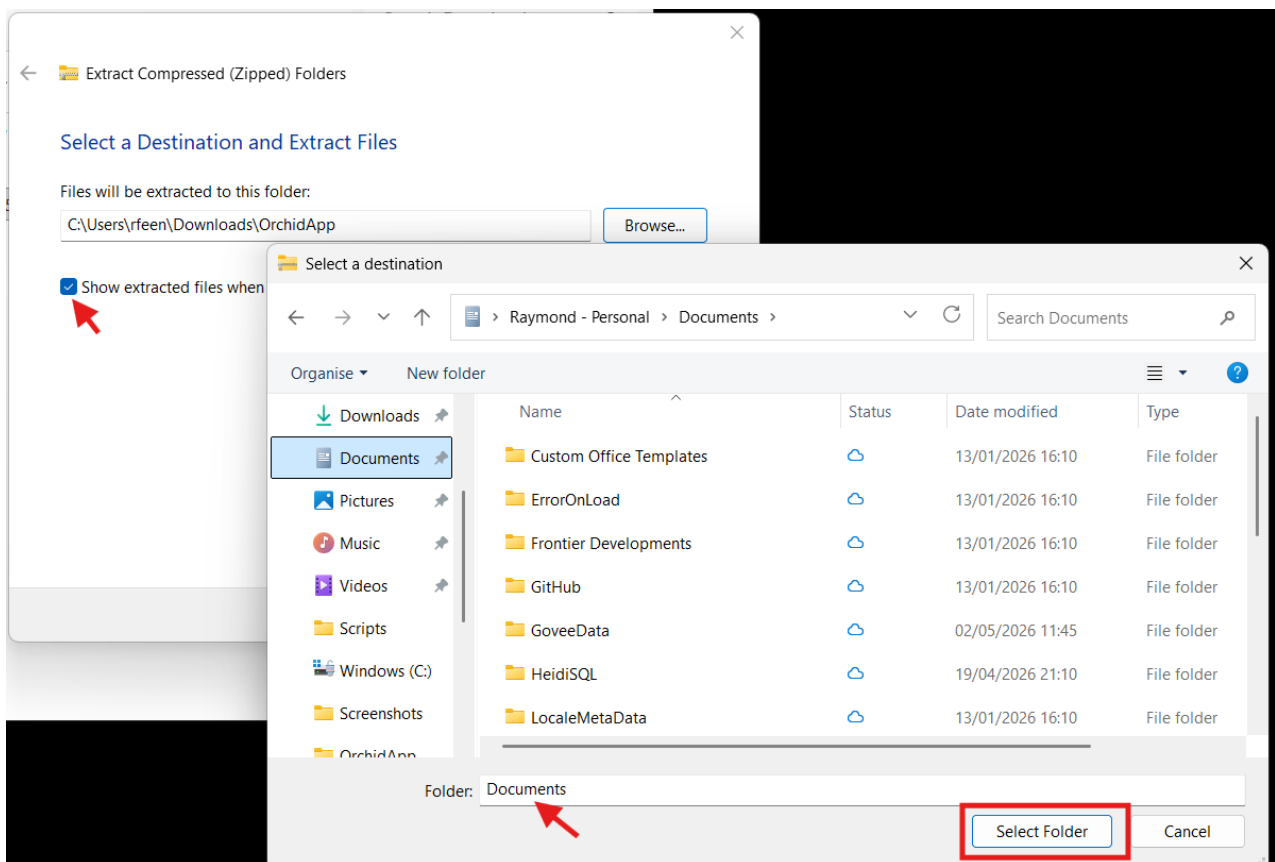

Open File Explorer and go to the folder containing OrchidApp.zip. It is likely that it will be in the Downloads folder as it is in this example.

Right-click OrchidApp.zip and choose Extract All...

2. Choose where OrchidApp will be extracted

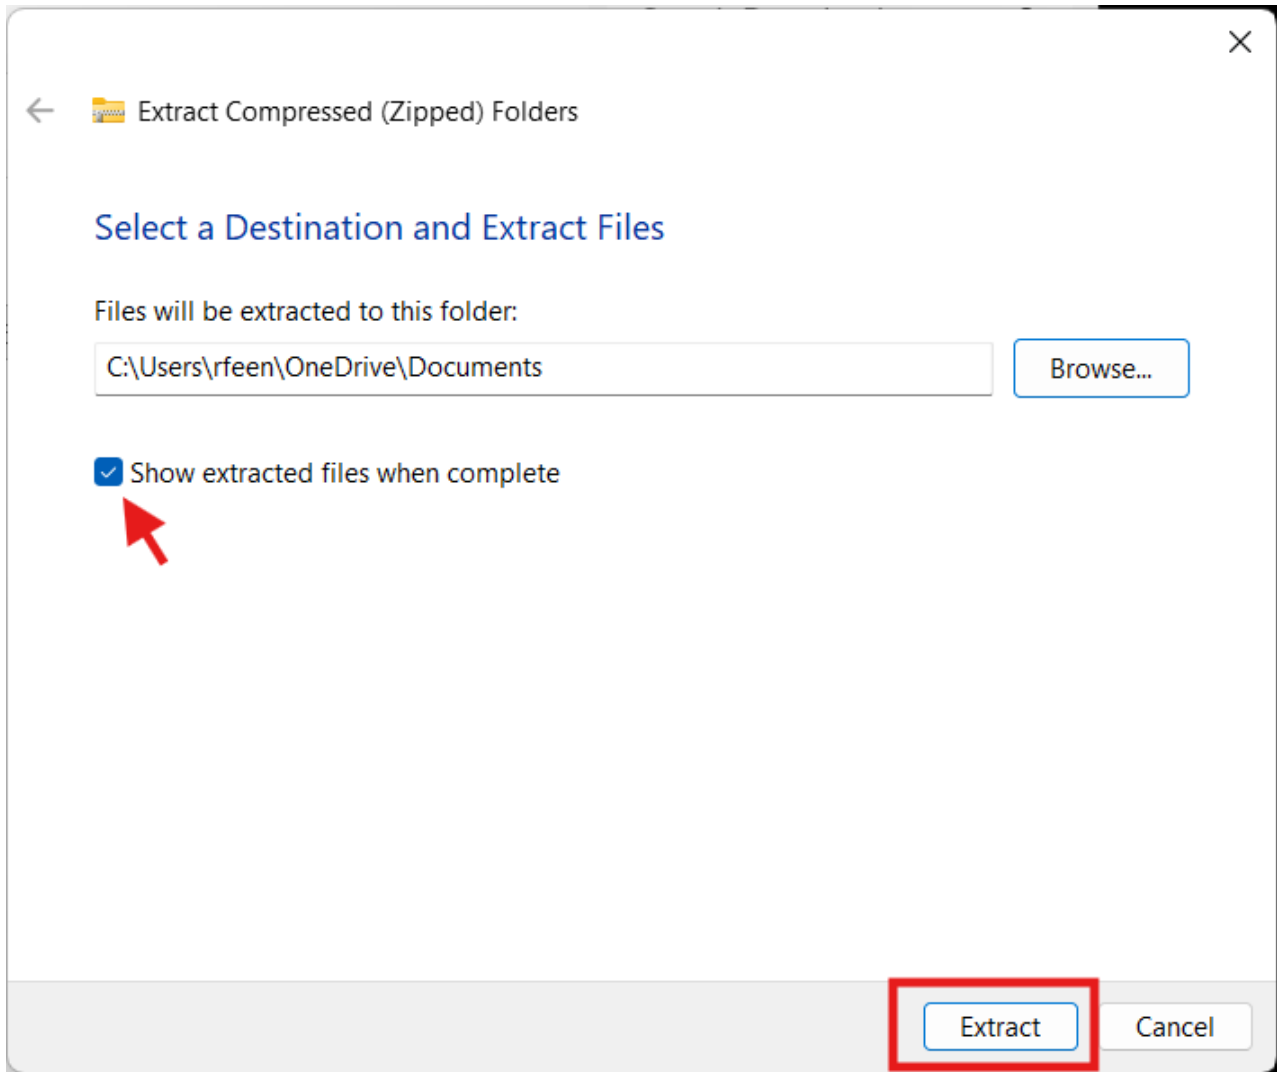

The extraction wizard will ask where to put the files. You can use the default folder or select another permanent location.

Browse to the folder where you want OrchidApp to live, such as Documents.

3. Extract the files

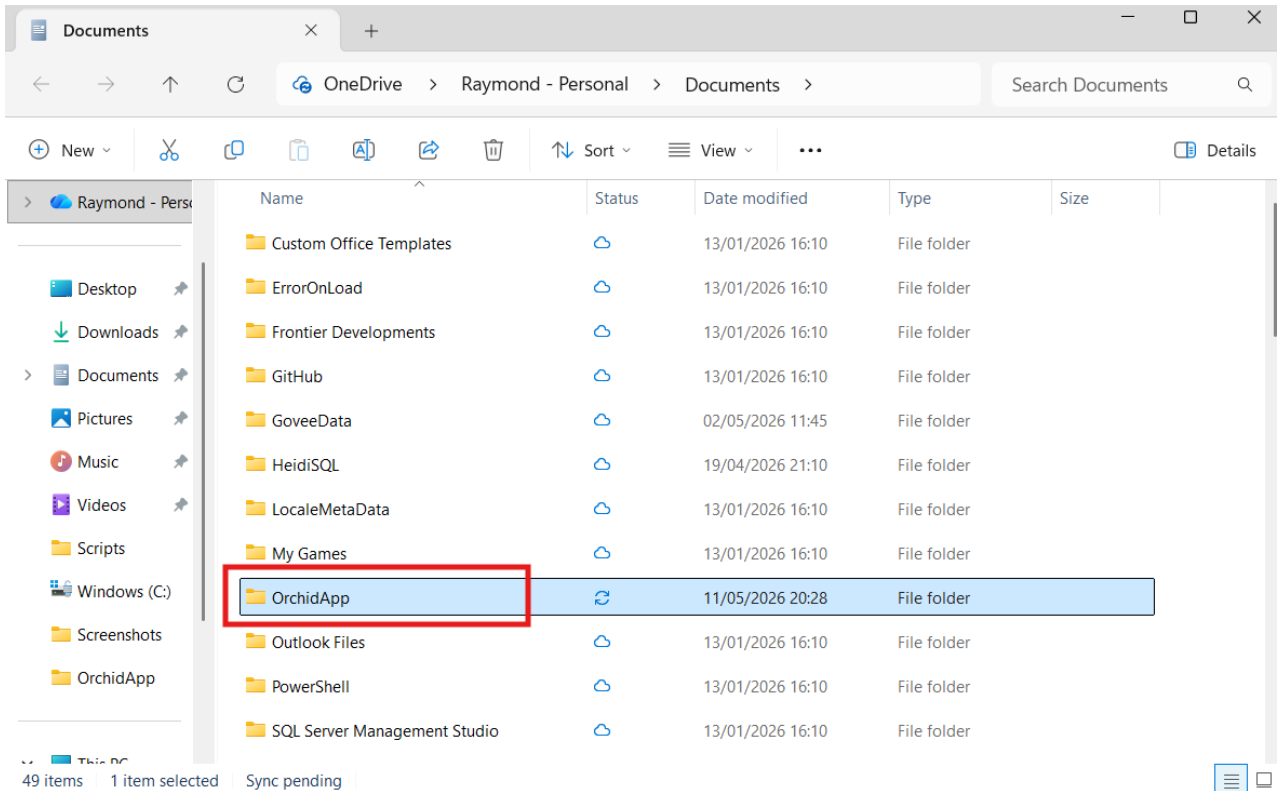

Keep Show extracted files when complete ticked, then click Extract.

Leave Show extracted files when complete ticked, then click Extract.

4. Open the OrchidApp folder

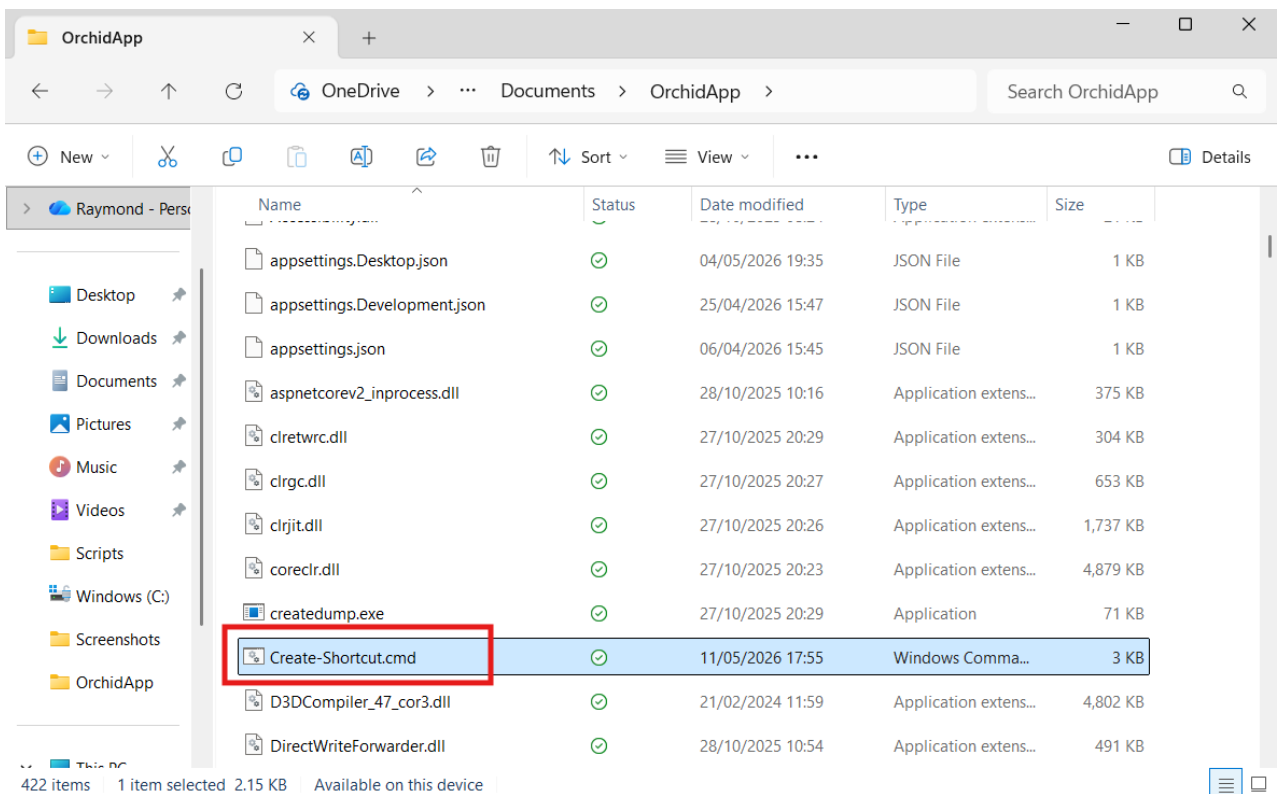

When extraction finishes, File Explorer opens the OrchidApp folder. This folder contains the application files.

The extracted OrchidApp folder appears in Documents.

5. Run the shortcut creator

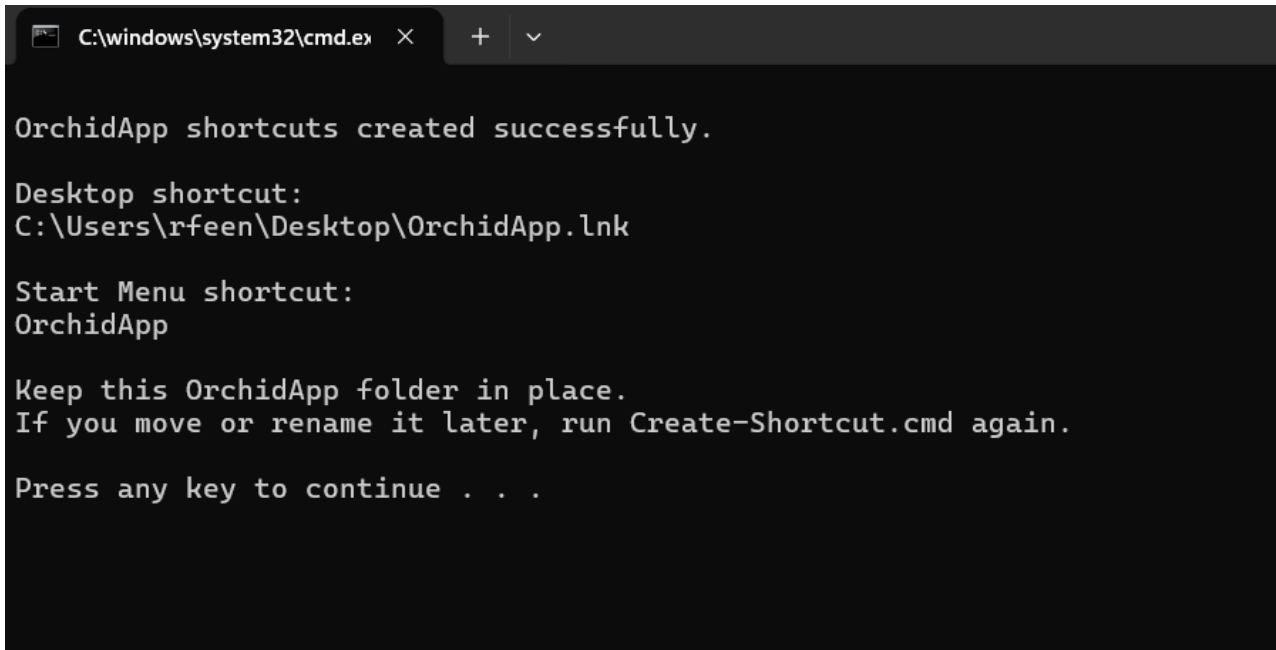

In the OrchidApp folder, select and run (double click or right-click and select Run/Run as Administrator) Create-Shortcut.cmd. This creates the desktop and Start menu shortcuts.

Run Create-Shortcut.cmd from inside the OrchidApp folder.

6. Confirm the shortcuts were created

A command window confirms that the OrchidApp shortcuts were created successfully. Press any key to close the window.

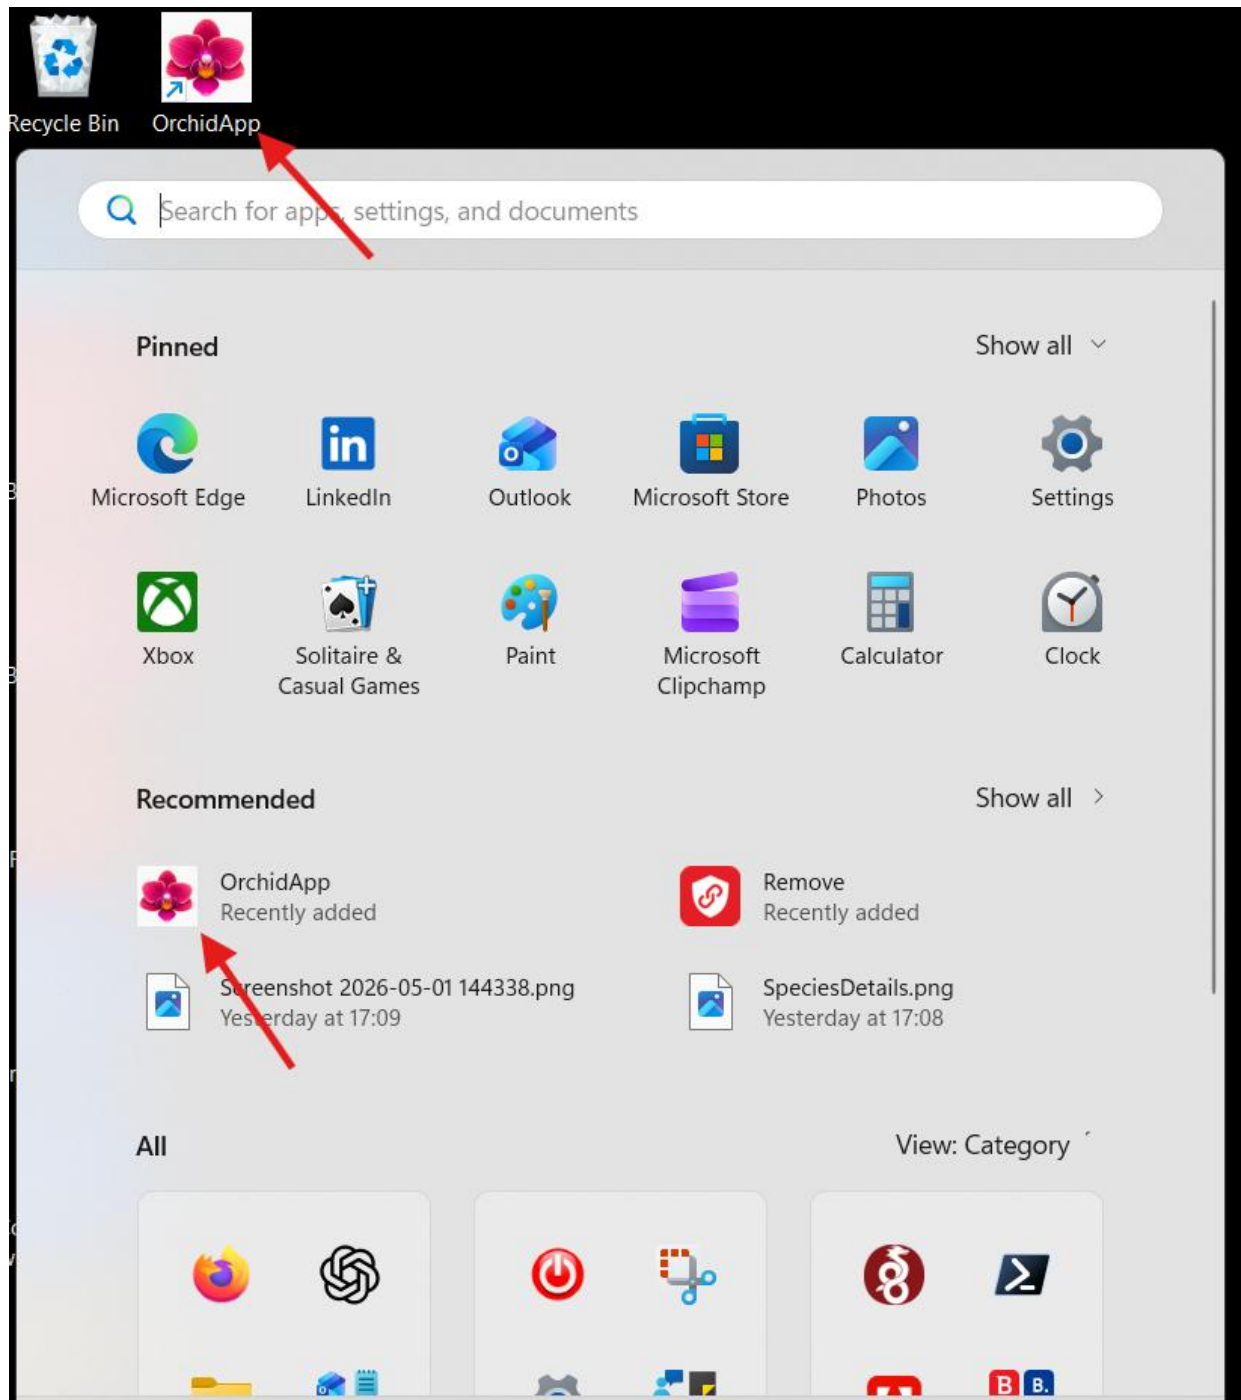

A screenshot of a Windows command prompt window. The title bar shows the path 'C:\windows\system32\cmd.exe' and standard window controls. The command prompt displays the following text: 'OrchidApp shortcuts created successfully.', 'Desktop shortcut:', 'C:\Users\rfeen\Desktop\OrchidApp.lnk', 'Start Menu shortcut:', 'OrchidApp', 'Keep this OrchidApp folder in place.', 'If you move or rename it later, run Create-Shortcut.cmd again.', and 'Press any key to continue . . .'.

```
C:\windows\system32\cmd.exe × + ▾  
  
OrchidApp shortcuts created successfully.  
  
Desktop shortcut:  
C:\Users\rfeen\Desktop\OrchidApp.lnk  
  
Start Menu shortcut:  
OrchidApp  
  
Keep this OrchidApp folder in place.  
If you move or rename it later, run Create-Shortcut.cmd again.  
  
Press any key to continue . . .
```

The command window confirms that the desktop and Start menu shortcuts were created.

7. Open OrchidApp

You can now open OrchidApp from the desktop shortcut or from the Start menu.

Open OrchidApp from the desktop or Start menu.

After installation

- Use the desktop shortcut or Start menu shortcut to launch OrchidApp.
- Keep the OrchidApp folder in place.
- If you move or rename the folder later, open the new OrchidApp folder and run Create-Shortcut.cmd again.

You are ready to use OrchidApp when the OrchidApp shortcut appears on the desktop or in the Start menu.

Troubleshooting

Problem	What to do
I cannot see Create-Shortcut.cmd	Check that you opened the extracted OrchidApp folder, not the original ZIP file.
The shortcut does not work after moving the folder	Open the new OrchidApp folder and run Create-Shortcut.cmd again.
Windows asks whether to allow the command file to run	Confirm only if the file came from the trusted OrchidApp package you intended to install.
